Notes: CV = coefficient of variation. A(ϵ) refers to the Atkinson index with a CES function with parameter ϵ . E(ϵ) refers to the generalized entropy index with parameter ϵ . E(1) = Theil. Data for

Dominican Republic (1995) and Honduras, Trinidad and Tobago, and Venezuela (1989) include only monetary income from labor sources.

Ecuador		53.0	54.3	
Guatemala			56.0	
Paraguay		57.8	54.9	
Trinidad and Tobago	47.2			

Notes: The Gini coefficients for Bolivia and Colombia for the early 1990s were estimated by extrapolating the changes in the Gini for urban areas (see Table 3.5). A similar procedure was applied for Peru using the areas covered in 1991. To compute the Latin American average for the mid-1990s, a Gini of 54.1 was assumed for Nicaragua.

Source: Authors' calculations based on microdata from household surveys.

TABLE A.7.

Distribution of household income divided by alternative equivalent scales, household per capita income for urban and rural areas, household labor and monetary income per capita, total household income, and equivalized income for different age groups: Gini coefficients

Country	Per capita	Equivalized	Equivalized	Equivalized	Equivalized	Equivalized	Per capita	Per capita	Total	Equivalized	Equivalized	Equivalized	Equivalized				
	income	income A	income B	income C	income D	income E	income Only urban	income Only rural	income Only labor	income Only monet	income Only labor	income monetary	income Urban labor	household income	income A Age 0-10	income A Age 20-30	income A Age 40-50

Notes: The poverty lines in Székely 1997, 2001 and Sala-i-Martin 2002 is US\$2 per day. In Wodon and others 2001, poverty line equals twice the food poverty lines, which is based on the cost of country-specific food baskets providing

2,200 kcal per day per person.

Notes: Regressions estimated by Heckman maximum likelihood. Dependent variable: logarithm of hourly wage from primary job of individuals ages 25–55. Explanatory variables: educational dummies, age, age squared, regional dummies, and urban/rural dummy. Selection equation: same variables plus number of children and school attendance.

Source: Authors' calculations based on microdata from household surveys.

Notes: Dispersion in unobservables = standard deviation of error term in Mincer equations of Table 5.11. Gender wage gap = ratio of the mean of the counterfactual wage that men would earn if they were paid like women over the actual average wage for men. Higher values in column (v) mean a narrower gender gap in hourly wages.

Source: Authors' calculations based on microdata from household surveys.

Notes: Water refers to the availability of a source of water in the house or lot. The variable restroom is equal to 1 when the household has a restroom with a toilet connected to the sewage system or to a septic tank. The variable electricity includes all sources of electricity. Telephone includes fixed and cellular phones.

FIGURE A.3.
Aggregate welfare measures

Notes: See Lambert 1993 for details on the aggregate welfare functions. Atk(e) refers to the function proposed by Atkinson 1970, i.e., a CES function with parameter equal to e. First observation for each country = 100.
